Design Patterns - Facade Pattern

[⬅ Previous Page](#)[Next Page ➡](#)

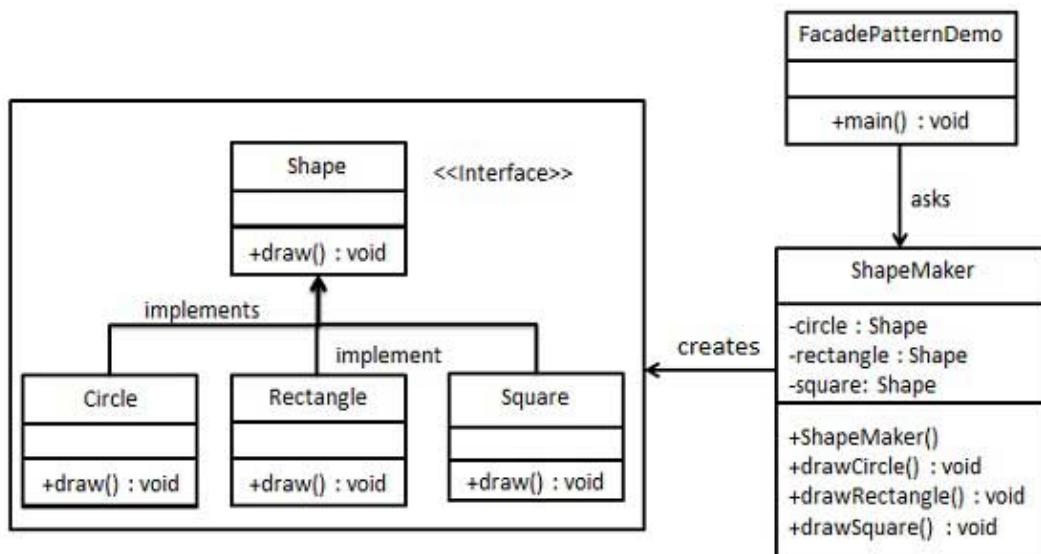

Facade pattern hides the complexities of the system and provides an interface to the client using which the client can access the system. This type of design pattern comes under structural pattern as this pattern adds an interface to existing system to hide its complexities.

This pattern involves a single class which provides simplified methods required by client and delegates calls to methods of existing system classes.

Implementation

We are going to create a *Shape* interface and concrete classes implementing the *Shape* interface. A facade class *ShapeMaker* is defined as a next step.

ShapeMaker class uses the concrete classes to delegate user calls to these classes. *FacadePatternDemo*, our demo class, will use *ShapeMaker* class to show the results.

Step 1

Create an interface.

Shape.java

```
public interface Shape {
    void draw();
}
```

Rectangle.java

```
public class Rectangle implements Shape {  
  
    @Override  
    public void draw() {  
        System.out.println("Rectangle::draw()");  
    }  
}
```

Square.java

```
public class Square implements Shape {  
  
    @Override  
    public void draw() {  
        System.out.println("Square::draw()");  
    }  
}
```

Circle.java

```
public class Circle implements Shape {  
  
    @Override  
    public void draw() {  
        System.out.println("Circle::draw()");  
    }  
}
```

Step 3

Create a facade class.

ShapeMaker.java

```
public class ShapeMaker {  
    private Shape circle;  
    private Shape rectangle;  
    private Shape square;  
  
    public ShapeMaker() {  
        circle = new Circle();  
        rectangle = new Rectangle();  
        square = new Square();  
    }  
  
    public void drawCircle(){  
        circle.draw();  
    }  
    public void drawRectangle(){  
        rectangle.draw();  
    }  
}
```

Step 4

Use the facade to draw various types of shapes.

FacadePatternDemo.java

```
public class FacadePatternDemo {  
    public static void main(String[] args) {  
        ShapeMaker shapeMaker = new ShapeMaker();  
  
        shapeMaker.drawCircle();  
        shapeMaker.drawRectangle();  
        shapeMaker.drawSquare();  
    }  
}
```

Step 5

Verify the output.

```
Circle::draw()  
Rectangle::draw()  
Square::draw()
```

Advertisements

CREATE
COMBINE
MODIFY
files from your code

 **ASPOSE**
Your File Format APIs

The advertisement for Aspose features a light gray background. At the top, the words "CREATE", "COMBINE", and "MODIFY" are stacked vertically in a large, blue, sans-serif font. Below them, the phrase "files from your code" is written in a smaller, black, sans-serif font. To the right of the text, there are three overlapping icons representing file formats: a green "XLS" icon, a blue "DOC" icon, and a red "PDF" icon. At the bottom, the Aspose logo is displayed, consisting of a colorful circular swirl icon followed by the word "ASPOSE" in a bold, black, sans-serif font, and the tagline "Your File Format APIs" in a smaller font below it.
