Design Patterns - Filter Pattern

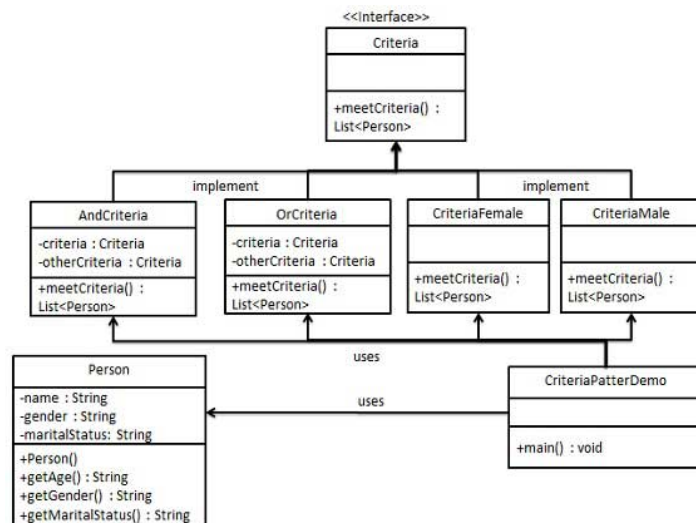

Advertisements

[Previous Page](#)

Filter pattern or Criteria pattern is a design pattern that enables developers to filter a set of objects using different criteria in a decoupled way through logical operations. This type of design pattern comes under structural pattern as this pattern comes to obtain single criteria.

Implementation

We're going to create a *Person* object, *Criteria* interface and concrete classes implementing this interface to filter *CriteriaPatternDemo*, our demo class uses *Criteria* objects to filter List of *Person* objects based on various criteria and the

Step 1

Create a class on which criteria is to be applied.

Person.java

```
public class Person {  
  
    private String name;  
    private String gender;  
    private String maritalStatus;  
  
    public Person(String name, String gender, String maritalStatus){  
        this.name = name;  
        this.gender = gender;  
    }  
}
```

```
}  
    public String getGender() {  
        return gender;  
    }  
    public String getMaritalStatus() {  
        return maritalStatus;  
    }  
}
```

Step 2

Create an interface for Criteria.

Criteria.java

```
import java.util.List;  
  
public interface Criteria {  
    public List<Person> meetCriteria(List<Person> persons);  
}
```

Step 3

Create concrete classes implementing the *Criteria* interface.

CriteriaMale.java

```
import java.util.ArrayList;  
import java.util.List;  
  
public class CriteriaMale implements Criteria {  
  
    @Override  
    public List<Person> meetCriteria(List<Person> persons) {  
        List<Person> malePersons = new ArrayList<Person>();  
  
        for (Person person : persons) {  
            if(person.getGender().equalsIgnoreCase("MALE")){  
                malePersons.add(person);  
            }  
        }  
        return malePersons;  
    }  
}
```

CriteriaFemale.java

```
import java.util.ArrayList;  
import java.util.List;  
  
public class CriteriaFemale implements Criteria {  
  
    @Override  
    public List<Person> meetCriteria(List<Person> persons) {  
        List<Person> femalePersons = new ArrayList<Person>();  
  
        for (Person person : persons) {  
            if(person.getGender().equalsIgnoreCase("FEMALE")){  
                femalePersons.add(person);  
            }  
        }  
        return femalePersons;  
    }  
}
```

CriteriaSingle.java

```
import java.util.ArrayList;  
import java.util.List;  
  
public class CriteriaSingle implements Criteria {  
  
    @Override  
    public List<Person> meetCriteria(List<Person> persons) {  
        List<Person> singlePersons = new ArrayList<Person>();  
  
        for (Person person : persons) {  
            if(person.getMaritalStatus().equalsIgnoreCase("SINGLE")){  
                singlePersons.add(person);  
            }  
        }  
        return singlePersons;  
    }  
}
```

```

private Criteria criteria;
private Criteria otherCriteria;

public AndCriteria(Criteria criteria, Criteria otherCriteria) {
    this.criteria = criteria;
    this.otherCriteria = otherCriteria;
}

@Override
public List<Person> meetCriteria(List<Person> persons) {

    List<Person> firstCriteriaPersons = criteria.meetCriteria(persons);
    return otherCriteria.meetCriteria(firstCriteriaPersons);
}
}

```

OrCriteria.java

```

import java.util.List;

public class OrCriteria implements Criteria {

    private Criteria criteria;
    private Criteria otherCriteria;

    public OrCriteria(Criteria criteria, Criteria otherCriteria) {
        this.criteria = criteria;
        this.otherCriteria = otherCriteria;
    }

    @Override
    public List<Person> meetCriteria(List<Person> persons) {
        List<Person> firstCriteriaItems = criteria.meetCriteria(persons);
        List<Person> otherCriteriaItems = otherCriteria.meetCriteria(persons);

        for (Person person : otherCriteriaItems) {
            if (!firstCriteriaItems.contains(person)) {
                firstCriteriaItems.add(person);
            }
        }
        return firstCriteriaItems;
    }
}

```

Step4

Use different Criteria and their combination to filter out persons.

CriteriaPatternDemo.java

```

public class CriteriaPatternDemo {
    public static void main(String[] args) {
        List<Person> persons = new ArrayList<Person>();

        persons.add(new Person("Robert", "Male", "Single"));
        persons.add(new Person("John", "Male", "Married"));
        persons.add(new Person("Laura", "Female", "Married"));
        persons.add(new Person("Diana", "Female", "Single"));
        persons.add(new Person("Mike", "Male", "Single"));
        persons.add(new Person("Bobby", "Male", "Single"));

        Criteria male = new CriteriaMale();
        Criteria female = new CriteriaFemale();
        Criteria single = new CriteriaSingle();
        Criteria singleMale = new AndCriteria(single, male);
        Criteria singleOrFemale = new OrCriteria(single, female);

        System.out.println("Males: ");
        printPersons(male.meetCriteria(persons));

        System.out.println("\nFemales: ");
        printPersons(female.meetCriteria(persons));

        System.out.println("\nSingle Males: ");
        printPersons(singleMale.meetCriteria(persons));

        System.out.println("\nSingle Or Females: ");
        printPersons(singleOrFemale.meetCriteria(persons));
    }

    public static void printPersons(List<Person> persons){

        for (Person person : persons) {
            System.out.println("Person : [ Name : " + person.getName() + ", Gender : " + person.getGender() + ", Marital Status : " + person.getMaritalStatus() + " ]");
        }
    }
}

```

Verify the output.

Males:

Person : [Name : Robert, Gender : Male, Marital Status : Single]

Person : [Name : John, Gender : Male, Marital Status : Married]

Person : [Name : Mike, Gender : Male, Marital Status : Single]

Person : [Name : Bobby, Gender : Male, Marital Status : Single]

Females:

Person : [Name : Laura, Gender : Female, Marital Status : Married]

Person : [Name : Diana, Gender : Female, Marital Status : Single]

Single Males:

Person : [Name : Robert, Gender : Male, Marital Status : Single]

Person : [Name : Mike, Gender : Male, Marital Status : Single]

Person : [Name : Bobby, Gender : Male, Marital Status : Single]

Single Or Females:

Person : [Name : Robert, Gender : Male, Marital Status : Single]

Person : [Name : Diana, Gender : Female, Marital Status : Single]

Person : [Name : Mike, Gender : Male, Marital Status : Single]

Person : [Name : Bobby, Gender : Male, Marital Status : Single]

Person : [Name : Laura, Gender : Female, Marital Status : Married]
