

## Facelets JSF Tags

JSF provides special tags to create common layout for a web application called facelets tags. These tags gives flexibility to manage common parts of a multiple pages at one place.

For these tags you need to use the following namespaces of URI in html node.

```
<html
  xmlns="http://www.w3.org/1999/xhtml"
  xmlns:ui="http://java.sun.com/jsf/facelets"
>
```

Following are important *Facelets Tags* in JSF 2.0:

S.N.	Tag & Description
1	<a href="#">Templates</a> We'll demonstrate how to use templates using following tags <ul style="list-style-type: none"><li>• &lt;ui:insert&gt;</li><li>• &lt;ui:define&gt;</li><li>• &lt;ui:include&gt;</li><li>• &lt;ui:define&gt;</li></ul>
2	<a href="#">Parameters</a> We'll demonstrate how to pass parameters to a template file using following tag <ul style="list-style-type: none"><li>• &lt;ui:param&gt;</li></ul>
3	<a href="#">Custom</a> We'll demonstrate how to create custom tags.
4	<a href="#">Remove</a> We'll demonstrate capability to remove JSF code from generated HTML page.
